

How to use FunkyGuitar?

Easy! FunkyGuitar Strum...well...play it! The demo has just one groove so you don't need to change anything. FunkyGuitar doesn't have any chord recognition so you don't have to select things, choose functions from menus or forced to a limited chord variations. Just play notes on your keyboard and it strums them! You can press notes without any sense...YES FunkyGuitar will strum them!

FunkyGuitar Muted?

It has just one groove, one muted pattern from C3 to G3. To play the variation keep pressed a key, a note from C3 to G3 and press a key from C4 to E4 and you will introduce a muted variation. Try it. You can also play some noise effects such as slides etc. Check the Guide in the section GUIDE in contact.
